MAG-NET hub storitve - v razvoju

Pomembno: do dokončanja zgornjih dveh nadstropij DOMA (t.i. MAG-NET huba), se bodo storitve pilotno izvajale v spodnjih treh nadstropjih - v pilotni fazi (od 11.2026 - 11.2027). Po dokončanju prostorov (od 11.2027), pa bodo te storitve prešle v fazo rednega delovanja.

5.1 DOM Šola

DOM Šola is an open and curated educational platform focused on culture, creativity, collaboration, and contemporary skills. It connects existing high-quality educators, organisations, and communities while gradually developing its own educational formats and programs.

The service combines workshops, lectures, mentoring programs, peer-to-peer learning, community events, and interdisciplinary educational content connected to culture, urban development, sustainability, participation, and other themes addressed by MAG-NET.

DOM Šola functions both as:

- a program platform for organising and curating educational activities,
- and as an operational system for managing spaces, partners, mentors, participants, schedules, applications, communication, and educational resources.

The program is designed for a wide range of users, including youth, students, cultural workers, creatives, organisations, public institutions, local communities, and other stakeholders.

The development model is gradual and community-driven:

- the pilot phase focuses on testing formats, partnerships, operational processes, and user needs,
- while the long-term phase establishes DOM Šola as a stable and recognizable educational pillar of DOM and the MAG-NET hub ecosystem.

5.2. Zbornica

Zbornica is a community-oriented coworking and shared workspace program designed primarily for actors from the cultural and creative sectors. Rather than functioning as a conventional office rental service, it is conceived as a collaborative environment that supports shared work, networking, knowledge exchange, project development, and long-term community building.

The service is based on the principle of shared use of workspaces and infrastructure, offering an alternative to individual offices that are often underused or financially inaccessible for smaller

organisations and independent professionals. In addition to workspaces, the long-term model also includes meeting rooms, spaces for video calls, group work, and community activities.

Zbornica functions both as:

- a physical coworking and collaboration space,
- and as a community management and operational system for memberships, reservations, access management, scheduling, communication, and user coordination.

The development model is gradual and community-driven:

- the pilot phase focuses on testing temporary shared workspace formats, user habits, operational models, and community dynamics,
- while the long-term phase establishes Zbornica as a permanent coworking and collaboration infrastructure within DOM and the wider MAG-NET ecosystem.

5.3. DOM Event Incubator

DOM Event Incubator is a platform for developing, testing, and producing new events and program formats. It enables individuals, communities, organisations, and creators to develop event ideas, test them in practice, and implement them within DOM or elsewhere in the city.

The program combines access to spaces with production, technical, organisational, communication, and mentorship support. Its goal is not only to host events, but to actively support the emergence of new organisers, producers, collaborations, audiences, and cultural formats that strengthen the local creative ecosystem.

The Event Incubator functions both as:

- a support program for event development and cultural production,
- and as an operational system for managing applications, event workflows, spaces, technical requirements, communication, partnerships, budgets, schedules, ticketing, and production processes.

The service is designed as a gradual and experimental development environment:

- the pilot phase focuses on testing event formats, operational models, support services, and collaboration processes,
- while the long-term phase establishes the Event Incubator as a continuous platform for developing new events, partnerships, and community-driven programming within the DOM and MAG-NET ecosystem.

5.4. DOM srečališče skupnosti - DOM Community Hub

DOM Community Hub is a program dedicated to supporting the meeting, development, and long-term growth of different formal and informal communities within DOM. It provides communities, collectives, initiatives, and individuals with access to spaces, basic support infrastructure, and opportunities for regular gatherings, collaboration, and shared activities.

The program supports various formats, ranging from informal social gatherings and meetups to smaller thematic events, discussions, presentations, and community-led activities. A strong emphasis is placed on continuity and regular meetings, as long-term interaction enables the formation of relationships, collaborations, projects, and active communities.

The Community Hub functions both as:

- a platform for connecting and supporting communities,
- and as an operational system for managing spaces, schedules, recurring meetings, communication, support services, community onboarding, and coordination between different groups and programs within DOM.

The service is designed as a gradual and evolving community infrastructure:

- the pilot phase focuses on testing meeting formats, identifying community needs, and activating the first user groups,
- while the long-term phase establishes a structured support system for communities and positions DOM as a central meeting and networking space for cultural, creative, and community-driven initiatives in the city.

5.5. DOM Residency Program

The DOM Residency Program is an international residency platform designed for artists, creators, researchers, lecturers, and other professionals whose work contributes to the development of the local cultural and creative environment. The program will be launched with the opening of two residency apartments within DOM.

The residency model is conceived as a tool for international exchange, knowledge transfer, collaboration, and long-term network building. Residents are not only accommodated in the space, but are actively integrated into the programs, communities, and activities of DOM and the wider city environment through workshops, lectures, mentoring, events, exhibitions, and community interactions.

The Residency Program functions both as:

- an international exchange and community engagement program,
- and as an operational system for managing applications, selection processes, partnerships, accommodation, schedules, resident support, program integration, and external collaborations.

The service is closely connected with other DOM programs, including education, community activities, event development, and exhibitions, while also contributing to the broader development of a city-wide residency strategy for Celje.

The development model is gradual and partnership-driven:

- the preparatory phase focuses on researching residency models, developing operational standards, establishing partnerships, and testing pilot residencies,
- while the long-term phase establishes DOM and Celje as an internationally recognized residency and collaboration environment within the cultural and creative sectors.

5.6. DOM Gallery

DOM Gallery is a curated exhibition program dedicated to contemporary artistic, creative, and interdisciplinary content. The program is centered around the activation of the “street gallery” — a public-facing exhibition surface integrated into the architecture of DOM and visible directly from the urban environment.

In addition to the street gallery, the program also uses other exhibition surfaces within the building, such as staircases, shared areas, and transitional spaces, while also supporting temporary pop-up exhibitions, presentations, and sales formats for artists and actors from the cultural and creative sectors.

The Gallery functions both as:

- a flexible exhibition and presentation platform,
- and as an operational system for managing exhibitions, curatorial processes, artist collaborations, installations, schedules, communication, partnerships, and integration with other DOM programs.

The program is designed as a modular and collaborative platform that connects artists, curators, producers, residents, communities, and partner organisations through experimental and publicly accessible exhibition formats.

The development model is gradual and adaptive:

- the pilot phase focuses on testing exhibition formats, spatial possibilities, curatorial approaches, and audience interaction,
- while the long-term phase establishes DOM Gallery as a recognizable and continuously evolving public-facing exhibition program connected to the wider DOM and MAG-NET ecosystem.

5.7. “Podporna pisarna”

“Podporna pisarna” nudi podporo ustvarjalcem, društvom in drugim organizacijam iz KKS pri prijavah na razpise, zagotavljanu priložnosti, …

5.8. Mestni laboratorij

Mestni laboratorij bo nekakšen legacy MAG-NETa - program za participacijo pri reševanju urbanih izzivov.

5.9., 5.10. Še ne vemo:)
